CS-204 Midterm 2021

Task: Create a small website about the best universities in the world. You will need to add the ability to create new universities and display them individually on a 'university.php' page and all of the universities on the home page. Upload the database provided by teacher to your server and use the database name specified below.

Pages to create:

-university.php: displays individual universitiesbased on the requested id
-create.php: form to create/add a university

Database:

-upload the SQL file provided by teacher to a DB name "cs204_midterm2"
-use this same name in you DB connection file

Form: create the following fields

-Input|text: name=university [the university's name]
-Input|number: name=rank [https://www.topuniversities.com/university-rankings/world-university-rankings/2021]
-Input|number: name=numstudent [number of students]
-Input|select: name=continent VALUES: [asia, africa, americas, europe, australia]
-input|text: image name=imgurl [an external url link to the planet from google]

Implement some basic error handling. Use prepared statements to insert new university into DB and then redirect user to the newly created planet using the header() function.

BONUS POINTS:
-add edit and delete functions
-create an about page, use your own design and pull the unis from the DB
-use font awesome icons throughout the project
